

KEPITAL® FA-20

A conductive grade reinforced with carbon fiber

KEPITAL® FA-20 is a conductive Polyoxymethylene (POM) grade reinforced with carbon fiber. Offers excellent thermal stability and stronger resistance to alkalis than acetal homopolymer. Possesses wide range of working temperature, high stiffness, high creep strength and high tolerance to organic chemicals. Exhibits fatigue-, creep resistance, long term dimensional stability and better flow enabling high speed production. Shows resistance to friction and wear. Is suitable for processing by injection molding. Used in electrical & electronics, automotive and industrial parts.

Rheological properties

Moulding shrinkage, parallel	0.9 %	ISO 294-4, 2577
------------------------------	-------	-----------------

Typical mechanical properties

Stress at break, 5mm/min	100 MPa	ISO 527-1/-2
Nominal strain at break	2 %	ISO 527-1/-2
Flexural Modulus	7150 MPa	ISO 178
Flexural Strength	135 MPa	ISO 178
Charpy notched impact strength, 23°C	4 kJ/m²	ISO 179/1eA
Poisson's ratio	0.388	

Thermal properties

Melting temperature, 10°C/min	165 °C	ISO 11357-1/-3
Temp. of deflection under load, 1.8 MPa	160 °C	ISO 75-1/-2

Electrical properties

Surface resistivity 1000 Ohm IEC 62631-3-2

Other properties

Density 1430 kg/m³ ISO 1183

Processing Texts

Pre-drying It is recommend to dry material at 80° C $\sim 90^{\circ}$ C (176° F $\sim 194^{\circ}$ F) for $3 \text{ h} \sim 4 \text{ h}$ if necessary.

possibly resistant

Defined as: Supplier has sufficient indication that contact with chemical can be potentially accepted under the intended use conditions and expected service life. Criteria for assessment have to be indicated (e.g. surface aspect, volume change, property change).

not recommended - see explanation
Defined as: Not recommended for general use. However, short-term exposure under certain restricted conditions could be acceptable (e.g. fast cleaning with thorough rinsing, spills, wiping, vapor exposure).

NOTICE TO USERS: Values shown are based on testing of laboratory test specimens and represent data that fall within the standard range of properties for natural material. These values alone do not represent a sufficient basis for any part design and are not intended for use in establishing maximum, minimum, or ranges of values for specification purposes. Colourants or other additives may cause significant variations in data values. Properties of moulded parts can be influenced by a wide variety of factors including, but not limited to, material selection, additives, part design, processing conditions and environmental exposure. Other than those products expressly identified as medical grade (including by MT® product designation or otherwise), Celanese's products are not intended for use in medical or dental implants. Regardless of any such product designation, any determination of the suitability of a particular material and part design for any use contemplated by the users and the manner of such use is the sole responsibility of the users, who must assure themselves that the material as subsequently processed meets the needs of their particular product or use. To the best of our knowledge, the information contained in this publication is accurate; however, we do not assume any liability whatsoever for the accuracy and completeness of such information. The information contained in this publication should not be construed as a promise or guarantee of specific properties of our products. It is the sole responsibility of the users to investigate whether any existing patents are infringed by the use of the materials mentioned in this publication. Moreover, there is a need to reduce human exposure to many materials to the lowest practical limits in view of possible adverse effects. To the extent that any hazards may have been mentioned in this publication, we neither suggest nor guarantee that such hazards are the only ones that exist. We recommend that persons intending to rely on any recommendation or to use any e
